

ICL2025 Special Session Call for Papers

ESG & Digital Transformation (DigitalESG)

Overview

Digital ESG special session aims to tackle a critical challenge facing organizations today. It delves into the dynamic interplay between digital transformation and Environmental, Social, and Governance (ESG) principles, with a particular focus on fostering sustainability, transparency, and ethical business practices across various sectors. This session serves as a platform for exploring innovative approaches, sharing best practices, and addressing implementation challenges, the session aims to advance the collective understanding and adoption of digital ESG transformation across diverse sectors and stakeholders.

The implementation of ESG in a resource consuming effort, but it is mandatory for EU organisations. Many organizations face challenges in balancing the costs of ESG implementation with the potential benefits, particularly in the context of competing priorities and limited resources.

Alignment with Company Strategy: The integration of Green transformation into the company's overall strategy ensures that ESG goals are embedded into core business objectives. This alignment facilitates a coherent and consistent approach to sustainability across all business functions and operations, enhancing long-term value creation and competitiveness.

Overall, while existing ESG transition solutions offer valuable tools and resources for organizations seeking to transition to ESG practices, they also have drawbacks that need to be addressed. These include complexity, cost, lack of standardization, and potential short-term focus on improving ESG ratings.

Topics
